# Dental Care for the Entire Family

A compassionate and dedicated professional, Sandip Ladani, DMD, MDS, is an expert in cosmetic and general dentistry, treats sleep apnea with medically approved oral devices and focuses on providing anxiety-free, painless dental procedures in his state-of-the-art dental practice located in Schnecksville.

At Extraordinary Smiles, patients take advantage of many soothing and relaxing methods from the Comfort Menu for the finest dental experience while getting Invisalign® or dental implants. The practice uses the most advanced technology available in the field of dentistry to make appointments faster, safer and more enjoyable.

The Schnecksville dental office served the local community during the pandemic by keeping their practice open for dental emergencies. The practice is taking extraordinary measures to deliver the safe dental and sleep care their patients need. The practice is outfitted to remove impurities with an office-wide, highly efficient central air purification system with ActivePure® (Certified Space Technology) and state-of-the-art aerosol extractors, eliminating harmful contaminants in the air. UV

light and EPA-approved hypochlorous acid fogging are used for sterilization and disinfection in each operatory and waiting area.

With daily screening of employees, full protective personal equipment and maintaining social distance between patients via minimal-to-no-wait-time appointments, the practice has made every effort possible to ensure a safe environment for their patients and staff.

They offer a broad range of services from cosmetic and preventive dental care to laser treatments for cold sores.

In addition to being a five-star family dental office, and experts in smile design and implant dentistry, Extraordinary Smiles also offers sleep treatment for adults and kids with sleep apnea and snoring problems. Dr. Ladani and his team use special equipment such as an acoustic pharyngometer and rhinometer to efficiently measure the size, structure and collapsibility of the oral and nasal airways to diagnose if they are too narrow or have obstructions that are causing sleep apnea. This non-invasive test takes less than five minutes and patients are treated with oral devices

that are a great alternative to bulky CPAP devices. Patients are offered a free sleep consultation as a part of the comprehensive dental exam.

With a "Patients First" philosophy, Dr. Ladani and his team of two hygienists, assistants and practice manager Maureen Digilio offer a warm, anxiety-free dental experience. Patients can choose aromatherapy, a heated neck pillow or weighted blankets, just to name a few comforts to help patients relax and keep them at ease.

Dr. Ladani and his team practice modern dentistry with exceptional service and gentle care. They strive to have a personable experience for all their patients.
